

**Core Safety Elements (CSE)** considers part of its mission to share its workplace safety expertise, knowledge of best practices, and industry experience through quality training and safety support services throughout a number of industries including construction, mining, mineral exploration and industrial. Our professional personnel can assist your organization in many ways which can allow you to focus on your core business. Whether it is small, start-up projects, or large operations with established sites, our training and safety support services can help support your existing safety programs or help fill in gaps that have been identified.

### **Safety Support Services**

CSE can provide a range of safety support services which are tailored to meet the risks in your company. Our experienced Safety Specialists will work closely with your organization to best deliver quality, cost-effective solutions that can help drive your safety program. These services include:

- Review, design and implementation of Safety Management Systems
- Developing company specific, risk focused Safety Programs and other related documents
- Conducting site or process specific risk assessments
- Compliance and system auditing tailored to your company specific safety program and operations
- Document and training management
- On or off-site safety coordination including contractor management

### **Safety Support Personnel**

Our experienced field personnel can become an integral part of your organizations safety program by providing valuable support with a number of activities. Our field personnel can:

- Conduct facility/site orientations for employees and contractors
- Provide site-specific training
- Lead and facilitate accident/incident investigations
- Conduct site safety meetings
- Conduct Job Hazard Analysis (JHA) or Job Safety Analysis (JSA) exercises
- Coordinate Emergency Response exercises
- Conduct site safety inspections and audits
- Coordinate site reporting requirements

### **Custom Training Solutions**

We recognize that not all people learn the same way, which is why we can develop both Computer-based and Instructor Led training options to fit your company's specific learning environment and staff. Whether you wish to have training delivered in-house or delivered by a CSE Trainer, your custom program will be tailored towards your specific business needs and risks.

We are able to collaborate with your staff as well as our own, building effective and useful trainings for not only your seasoned employees, but also for those employees for new on-boarding, role changes within a company, new sites or equipment operation, and upcoming changes within your own safety program. This service can also work in conjunction with our Safety Support Services to help your organization enhance its own safety program and help foster a positive, involving safety culture.

**Training Courses**

In addition to being able to offer tailor-made, custom training solutions, CSE also offers a wide compliment of training programs common to today’s industry needs. Our experienced trainers can deliver the following courses both on and off-site:
